## DETAILED ACTION

Claims 1-13 and 22-35 are pending in this action.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9, 11-13 and 24-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murad (US 5,804,594). The claims are directed to compositions with synergistic anti-inflammatory effects composed of a proteoglycan, a hexosamine sulfate, a flavone, extra virgin olive oil and diphenhydramine.

Murad teaches a pharmaceutical composition for treating unhealthy skin comprising glucosamine sulfate, chondroitin sulfate and quercetin (column 4, lines 1-31, 50 and column 10-11, Example 3). The referenced composition may be presented as discrete units such as capsules, tablets, aerosol sprays, creams, pastes, gels, solutions, dispersions, suspensions in an aqueous liquid, a non-aqueous liquid, or ointments (column 9, lines 33-49). Daily dosages range from 10mg to 20,000 me, wherein the glucosamine sulfate is about 3-17%, the chondroitin sulfate is about 3-17% and the quercetin is about 0.5-5% (column 8, lines 12-26). The composition also

includes at least one amino acid present in an amount of about 2 to 25 weight percent (column 6, lines 9-18). The composition may be administered via a variety of routes including oral, topical and transdermal (column 8, lines 43-52). In one embodiment, the composition may further comprise other therapeutic ingredients such as vitamin E (column 4, line 18).

Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over Murad (US 5,804,594) in view of Florio (US 6,136,795). Murad does not teach its composition used for inflammation, however, Florio teaches a dietary regimen of nutritional supplements which provides symptomatic relief from arthritis composed of a mixture of chondroitin sulfate and glucosamine sulfate (Abstract). It would have been prima facie obvious to a person of ordinary skill in the art, at the time of the claimed invention to further use the claimed composition to address inflammatory disease states. A person of ordinary skill in the art would have been motivated to include this additional use because chondroitin sulfate and glucosamine sulfate are known to be useful for treating inflammatory conditions.

### *Claim Objections*

Claims 10 and 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

*Conclusion*

No claims are allowed at this time.
